

Give Your Students an Out-of-this-world experience at the Casper Planetarium!

The main goal of the Planetarium is to provide quality astronomy and educational science programming for students of all ages. The Casper Planetarium presents astronomy-related programs designed with the state and national standards in mind.

Under the simulated night sky, students will learn to identify the constellations, take a trip to the planets in our solar system, or discover the more complex processes involved in star birth and star death. This unique learning environment will help students gain a concrete understanding of our universe.

Contact the Planetarium for a complete list of programs specific to grade level and the standards addressed in each. Allow one-and-a-half hours for the program, time to explore the exhibits in the lobby and our gift shop.
